

This document contains release notes for Version 4.1 of FOIAonline, for release after Close of Business (COB) on December 8th, 2020. This document provides a summary of the bug fixes and other updates contained in the release.

Enhancements

- Added an email notification to be sent to the FOIA officer of an organization when a user submits a case file to that organization.

Bug Fixes

- Fixed issue where request creation would fail and partial requests would be created without complete information, including requester information and attachments.
- Fixed issue where agency users with a Professional role and Reviewer role were able to edit all cases at their acting agency level or below, when they should only be able to edit cases assigned specifically to their user.
- Fixed issue where agency users performing a Quick or Advanced search would yield results from other FOIAonline agencies.
- Fixed issue where public and registered users were able to see referrals, consultations, and task case types in the Quick or Advanced search results when they should only see requests, appeals, and records.
- Fixed issue where costs would round incorrectly and create errors in the Year End Annual Report generation if they contained too many decimal places.
- Fixed issue where certain values in the Year End Annual Report were maxing at 10,000.

Other Updates

- Updated the “Change Password” action on the “My Account” page to be inaccessible to Agency users who have PIV/CAC enabled.
- Prevented notifications from attempting to be sent to users when their notification preferences are not set to “Yes”.
